01 — Brand Mission & Positioning

Mission

NIAKX exists to close the gap between having an idea and having a company. Founders shouldn't need a designer, a copywriter, and a strategist on payroll before they can find out if their idea works — they need NIAKX.

Positioning

AI-powered digital products for modern founders.

NIAKX LaunchKit compresses the distance between a raw idea and a live, on-brand product presence — brand identity, pitch deck, website copy, and go-to-market assets — generated together from a single brief and kept consistent as they evolve.

Brand Pillars

- Clarity — Every screen, sentence, and slide earns its place. We remove before we add.
- Velocity — We are built for founders racing the clock. Speed is a feature, not a side effect.
- Intelligence — AI is the engine, not the marketing. It should make founders feel capable, never replaced.
- Craft — Premium is a discipline. Every pixel, word, and interaction reflects the standard our customers are trying to reach.

02 — Logo System

Primary Logo

The primary lockup pairs the N symbol with the NIAKX wordmark. Use this version whenever there is enough horizontal space and a light background.

Primary logo — full color, on white.

N Symbol

The N symbol is an abstract monogram: two structural bars anchor the mark while a diagonal — rendered in the Signal Blue → Ion Cyan gradient — completes the letterform. It is the only element that should ever be used alone (app icons, favicons, social avatars, loading states).

N symbol — standalone mark.

Light Version

For dark backgrounds, product UI in dark mode, and photography: the wordmark and bars invert to white, while the diagonal keeps its gradient for brand recognition.

Light (reversed) version — on Void Navy.

Dark Version

A fully monochrome rendering in Void Navy, for single-color print, embossing, engraving, or any context where the gradient cannot reproduce reliably.

N NIAKX

Dark (monochrome) version — on white.

Favicon

A simplified, high-contrast tile of the N symbol on a Void Navy rounded square, tuned for legibility at 16–32px (browser tabs, bookmarks, notification icons).

Favicon / app icon tile.

03 — Logo Spacing & Minimum Size

Clearspace

Maintain clearspace equal to the width of one N-symbol bar on all sides of the logo — no text, icons, or edges may enter this zone. This applies to every version of the mark, at every size.

Minimum clearspace, measured from the outer edge of the mark.

Minimum Size

Below 24px, the diagonal accent and bar spacing begin to lose definition. Never scale the symbol below this threshold for digital use, or below 0.25in (18pt) for print.

The symbol at 24px, 40px, 64px, and 120px.

04 — Incorrect Logo Usage

The examples below show the four most common ways the NIAKX mark gets damaged in the wild. None of these are acceptable in any customer-facing, partner-facing, or internal material.

DON'T STRETCH

Never distort the proportions of the symbol or wordmark. Scale uniformly, always.

DON'T RECOLOR

The gradient and mark colors are fixed brand assets. Never substitute an off-palette color.

DON'T ROTATE

The mark reads correctly only in its upright orientation. Never rotate or tilt it for effect.

DON'T USE ON LOW-CONTRAST BACKGROUNDS

If the mark and its background sit close in value, contrast fails and the logo disappears. Always check contrast before placing the mark.

05 — Color Palette

NIAKX color is built for high-contrast, dark-first product surfaces with a precise electric accent. One color leads, one accents, the rest support.

Swatch	Name	Hex	Usage
	Void Navy	#0A0F1E	Primary background. The default canvas for dark-mode product, decks, and the website.
	Signal Blue	#2563EB	Primary brand color. Buttons, links, active states, the base of the gradient accent.
	Ion Cyan	#00C2FF	High-energy accent. Gradient endpoint, highlights, data visualization, hover states.
	Pure White	#FFFFFF	Reversed text and iconography on dark surfaces; light-mode background.
	Slate Surface	#1F1F2E	Secondary dark surface — cards, panels, and modals layered above Void Navy.
	Fog Grey	#94A3B8	Muted text, borders, dividers, and secondary/disabled UI states.

Usage Ratios

Apply an approximate 60 / 30 / 10 split: Void Navy carries 60% of any surface as the dominant background; Slate Surface and Fog Grey together cover 30% as structure and secondary content; Signal Blue and Ion Cyan are reserved for the remaining 10% — the moments that should draw the eye.

06 — Typography

Two typefaces carry the entire system. Space Grotesk gives NIAKX its technical, architectural personality at display sizes. Inter handles everything that needs to be read quickly and precisely.

Typefaces

- Space Grotesk — Headlines, product name, section titles, slide titles. Use Medium (500) for most headings and Bold (700) for hero moments and the wordmark.
- Inter — Body copy, UI labels, forms, tables, captions, and long-form documentation. Use Regular (400) for body, Medium (500) for emphasis, Semibold (600) for buttons.

Type Scale

Role	Typeface	Weight	Size/Line	Case
Display / H1	Space Grotesk	Bold (700)	48 / 56	Sentence case
H2	Space Grotesk	Bold (700)	36 / 44	Sentence case
H3	Space Grotesk	Medium (500)	28 / 36	Sentence case
H4 / Overline	Space Grotesk	Medium (500)	14 / 20	UPPERCASE
Body Large	Inter	Regular (400)	18 / 28	Sentence case
Body	Inter	Regular (400)	16 / 24	Sentence case
UI Label	Inter	Semibold (600)	14 / 20	Sentence case
Caption	Inter	Regular (400)	13 / 18	Sentence case

Pairing Rules

- Never set body copy in Space Grotesk beyond a single short line — it is a display face and loses legibility at paragraph sizes.
- Never set headlines in Inter when Space Grotesk is available.
- Use generous tracking on the NIAKX wordmark and uppercase overlines only; body text stays at default tracking.

07 — Favicon Usage

The favicon is the compressed, high-contrast tile of the N symbol. It is the version most people will see most often — in browser tabs, bookmarks, and search results — so contrast and simplicity matter more here than anywhere else in the system.

The favicon in a browser tab, alongside the full lockup used in-product.

Guidelines

- Always use the pre-built favicon tile — never crop the wordmark lockup down to icon size.
- Export at 16×16, 32×32, 48×48, and 180×180 (iOS/Android home-screen) from the master vector file, never by upscaling a small raster.
- Keep the rounded-square navy background intact; it's what gives the mark contrast against browser chrome in both light and dark OS themes.

08 — Social Media Usage

Across every platform, the N symbol — never the full wordmark lockup — is the profile picture. Its square-with-clearspace construction survives circular cropping on every major platform without losing legibility.

Guidelines

- Profile picture: use the favicon tile (symbol on Void Navy). Do not use the light or dark wordmark lockups as an avatar — they're proportioned for horizontal space, not a square or circular crop.
- Cover / banner images: Void Navy background with the full-color or light wordmark lockup, left-aligned with standard clearspace.
- Post graphics: Signal Blue and Ion Cyan are accents, not backgrounds — keep large fields in Void Navy, Slate Surface, or Pure White.

09 — Brand Consistency Rules

Always

- ✓ Use the correct logo version for the background it sits on (Primary/Dark on light, Light on dark).
- ✓ Preserve clearspace and respect minimum size at every scale.
- ✓ Keep the diagonal's Signal Blue → Ion Cyan gradient direction and colors exactly as specified.
- ✓ Pair Space Grotesk headlines with Inter body copy — never the reverse.
- ✓ Check contrast before placing the mark on any new background, photo, or color field.

Never

- ✗ Stretch, skew, or distort the symbol or wordmark's proportions.
- ✗ Recolor the mark outside the defined palette.
- ✗ Rotate, tilt, or apply effects (shadows, bevels, outlines) to the logo.
- ✗ Use the wordmark lockup as a profile picture or in any circular/square crop context.
- ✗ Place the mark on a background with insufficient contrast.

Ownership

This guide is maintained by the NIAKX brand team. Proposed exceptions to any rule above require sign-off before use in any customer-facing surface. Contact hello@niakx.com with questions.
